SUMMARY

Backend software engineer with hands-on experience building and supporting production software for fuel logistics and mid-market fuel marketers. Experience spans backend APIs, PostgreSQL, integrations, data migration, testing, customer issue resolution, and product workflows. Comfortable working across engineering and client-facing tasks and learning complex domain systems independently.

TECHNICAL SKILLS

Languages: Python, Java, SQL

Backend: FastAPI, SQLAlchemy, REST APIs, Alembic, Spring Boot, Hibernate

Databases: PostgreSQL, Redis, Multi-Tenant Systems

Engineering: API Development, Database Design, Integrations, Authentication, RBAC, Debugging

Product & QA: User Stories, Manual Testing, Test Cases, Data Migration, Production Support

Tools: Docker, Git, Postman, LangChain, LangGraph

EXPERIENCE

Backend Engineering Intern **Fueleo** **May 2026 – Present**

- Built and maintained production REST APIs using Python, FastAPI, SQLAlchemy, and PostgreSQL for a multi-tenant fuel logistics platform.
- Designed backend workflows for Brokerage, including RFQ communication, vendor assignment, business validations, and workflow handling.
- Built functionality for the Vendor Portal and automated Sales Order creation based on configurable inventory thresholds and business rules.
- Implemented centralized Active/Inactive lifecycle handling across ERP entities and maintained Alembic migrations for the PostgreSQL system.
- Worked on integrations and customer-facing issues across backend and frontend, tracing problems through application workflows and delivering fixes.
- Migrated and validated operational data from an external system, including customers, ship-tos, delivery information, locations, and product mappings.
- Wrote user stories and manual test cases, created client training material, and joined customer meetings to understand requirements and troubleshoot workflows.
- Maintained product aliases by researching product names and mapping them to existing system data; also helped reorganize sprint tasks and collect status updates across the team.

AI / Software Trainee **CamelIQ Software Solutions** **Mar 2025 – Jun 2025**

- Developed backend applications and REST APIs using Java and worked with relational databases in a team environment.
- Practiced software development, debugging, and code-quality workflows while working on application features and fixes.

PROJECTS

DecisionOS – AI Decision Support Platform

- Built a multi-agent backend using FastAPI, PostgreSQL, LangChain, LangGraph, and Vertex AI, with Google Calendar integration and deployment on Google Cloud Platform.

ERP Automation Modules

- Built and contributed to ERP workflows covering brokerage, vendor operations, automated sales orders, and centralized entity lifecycle management.

EDUCATION

Gururanak Institutions Technical Campus

Bachelor of Technology in Computer Science and Engineering

2022–2026

CGPA: 8.13
